EXPERIENCE

Data Analyst | Ipserlab LLC, USA

Jul 2025 – Present

- Designed a PostgreSQL data model (10+ tables) for vendor, product, and transaction data. Built validation framework using Python and SQL with 1,000+ test records, ensuring data quality for product analytics and reporting
- Led competitive and market analysis across 5+ competitors and 25+ vendors; uncovered gaps in pricing, features, and capabilities. Provided strategic recommendations that shaped product positioning and go-to-market strategy
- Established KPI framework for product analytics, defining key metrics (vendor response rate, buyer conversion, transaction volume) to measure product health. Framework adopted cross-functionally as baseline for post-launch growth tracking

Data Analyst | Maruti Suzuki India Limited, India

Jun 2022 – Jul 2023

- Reduced reporting prep from 3 days to 4 hours weekly by building executive Power BI dashboard tracking product KPIs across 240+ vehicle models; consolidated data from 6+ sources, enabling real-time launch readiness visibility for senior leadership
- Executed customer segmentation analysis using SQL on dealer sales data (50K+ records) to identify high-value buyer profiles. Insights informed regional marketing strategy and targeted campaign planning across 15+ regions
- Compiled competitive market intelligence on pricing, features, and market share trends across 10+ competitors. Presented findings to senior leadership, influencing product positioning and pricing decisions
- Partnered with Marketing and Sales teams to deliver weekly KPI readouts and market intelligence briefs to 20+ stakeholders, enabling informed decision-making in global planning discussions with Suzuki Japan

Data Analyst | Godrej & Boyce Mfg Co Ltd, India

Jan 2021 – Jun 2022

- Analyzed client account performance using SQL and Power BI, tracking revenue, project profitability, and delivery metrics across 4-5 accounts. Pinpointed high-value clients contributing 60% of revenue and informed account prioritization strategy
- Developed Power BI client health dashboard integrating delivery, cost, and satisfaction metrics across 10+ projects; enabled early risk detection, improving retention by 20%
- Conducted EDA and variance analysis on client project data to uncover cost drivers and delivery bottlenecks. Findings led to process improvements that reduced cost overruns by 15%

Business Analyst | AG Electrochem, India

May 2019 – Jan 2021

- Supported monthly sales analysis using Python and SQL for over 30 SKUs and 60 accounts, tracking product performance, regional demand, and customer mix; the insights informed account reviews and pricing discussions, leading to more accurate pricing decisions
- Automated weekly and monthly sales reports tracking revenue trends across 5 regions. Enabled sales team to identify underperforming accounts and prioritize follow-ups, improving response time by 15%
- Conducted RFM analysis to segment customer base and identify top 20% accounts contributing 65% of revenue; insights improved retention planning and reduced stockouts by 25%

PROJECTS

E-commerce Conversion Optimization | Python, SciPy, Pandas, Plotly, Streamlit [Link](#)

- Executed an A/B test analysis on 2K users comparing new vs existing product page design. Cleaned raw event data, defined conversion metric (purchase completion), and validated balanced randomization across region and device type
- Applied Chi-Square test for overall significance and Fisher's Exact test for segment-level analysis. Found that Europe + Tablet users converted at 0% on Treatment vs. 18.4% on Control ($p=0.015$), leading to a targeted rollout recommendation instead of full deployment

Customer Churn Prediction Engine | Python, Scikit-learn, SHAP, Streamlit [Link](#)

- Processed 7K+ customer records with 20+ features (tenure, contract type, monthly charges, service usage). Handled class imbalance using SMOTE and trained Random Forest model achieving 0.83 ROC-AUC
- Applied SHAP to interpret model decisions, identifying high monthly charges and month-to-month contracts as top churn drivers. Created a threshold framework (\$200 churn cost, \$20 retention cost) and deployed Streamlit app for real-time scoring

Customer Value Intelligence System | Python, SQL, Scikit-learn, Lifetimes, Streamlit [Link](#)

- Cleaned and transformed 500K+ e-commerce transactions into customer-level features: Recency, Frequency, Monetary value, and category affinity scores. Segmented customers using K-Means clustering and validated using silhouette scores
- Generated CLV forecasts using BG/NBD and Gamma-Gamma models from the lifetimes library. Deployed Streamlit dashboard showing value tiers and segment playbooks analysis revealed VIP segment (approx 20% of customers) drove approx 50% of revenue

SKILLS

Analytics & Experimentation:	A/B Testing, Hypothesis Testing, Power Analysis, Chi-square, Cohort Analysis, Funnel Analysis, Segmentation
SQL & Data Modeling:	SQL (CTEs, Window Functions, Joins), PostgreSQL, Data Modeling, ETL, Data Warehousing
Python:	Pandas, NumPy, Scikit-learn
Customer Analytics & ML:	Churn Prediction, CLV Modeling, RFM Analysis, Retention Analysis, K-Means Clustering, XGBoost, SHAP
BI & Visualization:	Power BI, Tableau, Plotly, Streamlit, Excel (Pivot Tables, VLOOKUP), KPI Dashboards
Tools & Cloud:	Git, GitHub, Jira, Azure Data Factory, Databricks (PySpark), Amplitude, Azure Synapse Analytics

EDUCATION

Northeastern University, Boston, Massachusetts

May 2025

Masters of Science in Data Analytics Engineering

Guru Gobind Singh Indraprastha University, New Delhi, India

Sept 2020

Bachelor of Technology in Mechanical and Automation
