SUMMARY

Data Analyst with 4+ years using SQL, Python, and BI tools to drive product and operational decisions. Builds KPI dashboards and stakeholder-ready reporting across cross-functional teams, with experience in experimentation (A/B testing) and customer analytics (churn, CLV, segmentation). Translates complex analyses into clear, actionable insights.

SKILLS

SQL:	CTEs, window functions, joins
Python:	pandas, NumPy, scikit-learn
Experimentation / Statistics:	A/B testing, hypothesis testing, t-tests, chi-square, power analysis, segmentation, regression
Data Visualization & BI:	Power BI, Tableau, Plotly, Streamlit, KPI dashboards
ML / Customer Analytics:	churn analysis, CLV modeling, clustering, XGBoost, SHAP
Data / Tools:	PostgreSQL, Excel, Git, GitHub, Jira, Azure Data Factory, Databricks (PySpark), Azure Synapse Analytics

EXPERIENCE

Supply Chain Analyst | Ipserlab LLC, USA

July 2025 – Present

- Designed a PostgreSQL relational data model (10+ tables) for vendor, product, supply, and transaction entities; defined relationships and data constraints to support scalable backend workflows and analytics-ready datasets
- Generated 1,000+ synthetic test records in Python and wrote SQL validation queries, which verified schema behavior and integration flows, ensuring data integrity and reliable end-to-end testing
- Owned competitive and supplier landscape research (5+ competitors, 25+ vendors); synthesized findings into recommendations supporting product positioning and go-to-market strategy

Assistant Manager (Data Analyst) | Maruti Suzuki India Limited, India

June 2022 – July 2023

- Built Power BI dashboards tracking product development KPIs and test metrics across 240+ vehicle models, consolidating inputs from multiple internal trackers to provide senior leadership weekly reporting on R&D progress and launch readiness
- Analyzed 1,000+ product test records using Python and SQL to evaluate performance against regulatory standards; built a repeatable workflow for data cleaning, validation, and summary tables, to inform product development decisions for future models
- Conducted competitive and market analysis on emerging powertrain technologies; delivered recommendations that informed long-term product strategy and R&D prioritization
- Partnered cross-functionally with Marketing, Sales, Vehicle Planning, and Suzuki Japan to support global planning discussions by delivering dashboards, stakeholder-ready KPI readouts, and market intelligence

Assistant Manager (Business Analyst) | Godrej & Boyce Mfg Co Ltd, India

Jan 2021 – June 2022

- Developed Power BI dashboards tracking project financials, budget variances, and delivery milestones across 4–5 government client accounts, providing leadership weekly visibility into cost and operational performance
- Diagnosed process bottlenecks and recurring inefficiencies using Python (pandas) and SQL; collaborated with cross-functional teams via Jira to implement fixes, track remediation progress, and improve on-time project delivery
- Led requirements gathering and issue resolution for government client accounts, coordinating across internal teams and end users to document requirements, align acceptance criteria, and meet client expectations

Business Analyst | AG Electrochem, India

May 2019 – Jan 2021

- Drove monthly sales and customer performance analysis using Python and SQL across 30 SKUs and 60+ accounts; quantified product performance, regional demand, and customer mix to support planning, account reviews, and pricing decisions
- Evaluated market and supply-chain data using SQL to identify demand patterns, inventory gaps, and fulfillment risks; produced weekly and monthly reports that supported inventory planning and reduced stockouts by 25%

PROJECTS

Customer Churn Prediction Engine | Python, XGBoost, Random Forest, SMOTE, SHAP [Link](#)

- Constructed a churn prediction system using Random Forest and SMOTE, achieving 0.83 ROC-AUC with profit-optimized decision thresholds
- Applied SHAP-based explainability to identify key churn drivers and designed a budget-constrained targeting approach for high-risk customers
- Created an interactive Streamlit app for churn scoring, risk classification, and retention recommendations

E-commerce Conversion Optimization | Python, Statistical Testing, Pandas, Plotly [Link](#)

- Evaluated conversion performance from a product page A/B test using Python and SQL, analyzing device-level and regional segment behavior
- Applied statistical tests (Chi-square, Fisher's Test, power analysis) on 2K observations to validate results and inform a selective rollout decision

Customer Value Intelligence System | Python, SQL, RFM, K-Means, BG/NBD, Streamlit [Link](#)

- Engineered an end-to-end customer value engine using RFM analysis, clustering, and probabilistic CLV forecasting
- Designed an interactive Streamlit dashboard to surface value tiers, at-risk customers, and growth segments for data-driven targeting

EDUCATION

Northeastern University, Boston, Massachusetts

May 2025

Masters of Science in Data Analytics Engineering | GPA: 3.92

Coursework: MLOps, NLP, Machine Learning, Statistical Modeling, Intro to Computational Statistics, Data Management for Analytics

Guru Gobind Singh Indraprastha University, New Delhi, India

Sept 2020

Bachelor of Technology in Mechanical and Automation

Coursework: Operations Research, Optimization Techniques, Numerical Analysis and Statistical Techniques
