

Anirudh Hegde

Data Analyst | BI & Product Analytics | SQL, Python, Power BI, dbt

Gurugram, India | anirudh.hegde07@gmail.com | +91 9999982364 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Data Analyst with 3+ years of experience across SaaS, automotive, and manufacturing, specializing in BI, product analytics, KPI reporting, funnel analysis, forecasting, and analytics engineering. Skilled in SQL, Python, Power BI, PostgreSQL, dbt, and A/B testing. Experienced in translating business workflows into analytics-ready data models, executive dashboards, and insights that inform product, pricing, and operational decisions.

EXPERIENCE

Data Analyst | Ipserlab LLC, USA

Jul 2025 - May 2026

- Standardized 12+ KPI definitions for buyer conversion, vendor response time, and transaction volume, creating a SQL-based single source of truth that informed 2 product roadmap changes and 1 pricing revision
- Led weekly funnel reviews with Product and Operations teams, analyzing buyer requests, vendor matching, quote submission, and transaction flow to convert drop-off patterns into prioritized actions
- Built a PostgreSQL marketplace data model across 10+ tables covering buyers, vendors, listings, quotes, and transactions, replacing ad hoc queries with reusable reporting logic that improved consistency across funnel, conversion, and revenue analysis
- Implemented 15+ Python and SQL validation checks for null detection, join integrity, duplicate records, and data freshness, catching upstream data issues before weekly leadership KPI reviews

Assistant Manager, Powertrain Planning Analytics | Maruti Suzuki India Limited, India

Jun 2022 - Jul 2023

- Benchmarked 8 powertrain variants against 240+ competitor models across 10+ OEMs, synthesizing fuel-efficiency, pricing, technology, and regulatory trends into a data-backed roadmap adopted by senior leadership
- Owned CAFE compliance analytics for the full vehicle fleet, modeling engine-wise fuel-efficiency projections, sales-mix scenarios, and emissions impact to identify optimization opportunities and support a 10% improvement in projected fuel-efficiency targets
- Developed engine-wise sales and carbon-emission forecasts through 2027 and built a Power BI dashboard tracking weekly actuals against projections, enabling leadership to monitor compliance gaps and adjust powertrain strategy
- Led weekly KPI reporting and planning reviews across powertrain, sales, and strategy stakeholders, analyzing forecast variances, competitor movements, and sales-mix trends to recommend product planning actions

Assistant Manager, Project & Business Analytics | Godrej & Boyce Mfg Co Ltd, India

Jan 2021 - Jun 2022

- Analyzed performance across up to 4 concurrent government B2B contracts, tracking cost variance, timeline adherence, resource utilization, and delivery risk to identify at-risk projects earlier
- Delivered a weekly Power BI project health dashboard consolidating delivery timelines, site issues, procurement status, and financial variance, replacing manual reporting with a centralized view for senior management
- Performed root-cause analysis on project cost overruns, tracing variance to supplier delays, procurement gaps, and reporting issues; supported operational fixes that reduced overruns by 15%
- Quantified revenue concentration across 40+ client accounts, identifying that the top 5 accounts contributed 60% of revenue and informing retention prioritization and resource allocation

PROJECTS

SaaS Churn & Retention Analytics Pipeline | *dbt Core, PostgreSQL, Python, XGBoost, Streamlit, GitHub Actions* [Link](#)

- Built an end-to-end analytics engineering pipeline ingesting 500K+ engagement records and Product Hunt API data into a layered PostgreSQL warehouse using dbt Core, with raw, staging, and marts models validated by 42 automated dbt and dbt-expectations tests in CI
- Modeled retention using Kaplan-Meier survival analysis and an XGBoost churn model with 0.71 AUC-ROC, identifying a 70% month-1 churn cliff, 8x longer retention for Power Users, and engagement frequency as the top churn driver

E-commerce Conversion Optimization | *Python, Pandas, SciPy, Statsmodels, Streamlit* [Link](#)

- Built an end-to-end A/B test analysis for a 2,000-user product-page experiment, combining Chi-Square testing, Fisher's Exact segment tests, 95% confidence intervals, and funnel analysis across view, cart, and purchase stages
- Found no significant overall lift from Treatment B (7.5% to 8.8%, $p=0.33$) and recommended against full rollout, while treating Europe + Tablet underperformance as an exploratory signal due to small segment size and multiple-comparison risk

Automated Bilingual Complaint Classification System | *Python, Airflow, Docker, GCP, Vertex AI, BigQuery, mBERT, GitHub Actions* [Link](#)

- Built an Airflow preprocessing pipeline for CFPB complaint data, handling English/Hindi language filtering, schema validation, PII anonymization, abusive-content filtering, and BigQuery loading
- Fine-tuned mBERT and XLM-RoBERTa models for product and department routing, achieving 0.69 F1 on product classification and integrating Vertex AI model deployment, fairness checks, drift monitoring, and CI/CD automation

SKILLS

SQL & Databases: SQL, PostgreSQL, CTEs, Window Functions, Data Modeling, Schema Design, Data Quality Testing

BI & Reporting: Power BI, Tableau, DAX, Business Intelligence, KPI Reporting, Executive Dashboards, Stakeholder Reporting

Analytics: A/B Testing, Hypothesis Testing, Funnel Analysis, Cohort Analysis, Retention Analysis, Churn Modeling, Forecasting

Python & Data Science: Python, Pandas, NumPy, SciPy, Scikit-learn, XGBoost, NLP, mBERT, XLM-RoBERTa, Model Evaluation

Data Stack & Automation: dbt Core, Airflow, Docker, GitHub Actions, CI/CD, ETL/ELT, GCP, BigQuery, Vertex AI, Cloud Run

EDUCATION

Northeastern University, Boston, Massachusetts

May 2025

Master of Science in Data Analytics Engineering, GPA: 3.92/4.0

Guru Gobind Singh Indraprastha University, New Delhi, India

Sept 2020

Bachelor of Technology in Mechanical and Automation
