SUMMARY

Senior Data Analyst with 4+ years of experience defining core KPIs, building dimensional data models, and leading cross-functional performance initiatives across product and enterprise environments. Hands-on experience modeling warehouse datasets in PostgreSQL and Redshift, centralizing metric logic, and implementing data validation checks to ensure reliable reporting. Partnered with Product and Operations teams to translate analysis into roadmap, pricing, and operational decisions.

EXPERIENCE

Data Analyst | Ipserlab LLC, USA

Jul 2025 – Present

- Defined buyer conversion, vendor response time, and transaction volume as company-wide core KPIs; standardized SQL logic so all teams operated from a single source of truth, directly informing two product roadmap changes and a pricing revision
- Led weekly funnel reviews with Product and Operations using SQL-based pipeline analysis; translated drop-off patterns into prioritized actions, reducing lag between issue detection and execution
- Constructed a PostgreSQL marketplace data model (10+ tables) spanning buyers, vendors, listings, and transactions; replaced fragile one-off queries with modular transformations that stabilized reporting workflows
- Implemented data validation checks in Python and SQL (null detection, join integrity, freshness logic); prevented upstream data issues from propagating into executive KPI reporting

Data Analyst | Maruti Suzuki India Limited, India

Jun 2022 – Jul 2023

- Modeled 50K+ dealer sales records in Amazon Redshift using window functions and multi-level joins to segment customers by purchase behavior and region; surfaced high-value buyer profiles that guided targeted campaigns across 15+ regions
- Designed an executive Tableau dashboard tracking KPIs across 240+ vehicle models; reduced leadership reporting preparation from 3 days to 4 hours by replacing manual data pulls with a structured, automated reporting layer
- Owned weekly KPI reporting for 20+ stakeholders across sales, marketing, and operations; the framework was later incorporated into global planning discussions with Suzuki Japan
- Conducted quarterly competitive analysis across 10+ OEMs tracking pricing, features, and market share; presented findings to VP-level leadership to support national positioning and pricing strategy

Data Analyst | Godrej & Boyce Mfg Co Ltd, India

Jan 2021 – Jun 2022

- Built a client health data model in SQL integrating delivery timelines, cost variance, and satisfaction indicators across 10+ projects; enabled early identification of at-risk accounts before escalation
- Performed root-cause analysis on project cost overruns using SQL; traced overspend to supplier delays and reporting gaps that masked budget variance until late in project cycles, supporting operational fixes that reduced overruns by 15%
- Quantified revenue concentration across 40+ client accounts; identified that 4–5 top accounts contributed 60% of revenue, directly informing retention prioritization and resource allocation decisions
- Delivered a Power BI client health dashboard consolidating project performance and financial metrics; contributed to a 20% improvement in client retention by enabling earlier intervention

Business Analyst | AG Electrochem, India

May 2019 – Jan 2021

- Executed RFM-based customer segmentation across 60 accounts; identified the top 20% contributing 65% of revenue and supported targeted retention and inventory prioritization
- Analyzed monthly SKU-level performance across 25+ products to uncover regional demand patterns; identified North Zone as underperforming and informed pricing adjustments that drove a 20% sales increase in the region
- Automated weekly and monthly sales reporting across 5 regions using Python; eliminated manual spreadsheet work and improved sales team response time by 15%, contributing to a 25% reduction in stockouts during supply constraints

PROJECTS

E-commerce Conversion Optimization | Python, SciPy, Pandas, Plotly, Streamlit [Link](#)

- Designed an A/B test framework for 2K users using Chi-Square and Fisher's Exact tests; identified a segment (Europe + Tablet) where the new design dropped conversion from 18% to 0%, recommending targeted rollout over full deployment

Customer Churn Prediction Engine | Python, Scikit-learn, SHAP, Streamlit [Link](#)

- Built a churn prediction system (Random Forest, SHAP) achieving 0.83 AUC on 7K records; implemented profit-curve thresholding that optimized retention spend, demonstrating potential 3x ROI on retention campaigns in simulated scenarios

SKILLS

Data Modeling & Warehousing: SQL, PostgreSQL, Amazon Redshift, Dimensional Modeling, KPI Standardization, Data Contracts

Transformation & Validation: dbt, Python (Pandas, NumPy), Data Quality Checks (Uniqueness, Join Integrity, Freshness), Root-Cause Analysis

Business Intelligence & Metrics: Tableau, Power BI, Funnel Analysis, Cohort Analysis, Competitive Intelligence, Stakeholder Reporting

Analytics & Experimentation: A/B Testing, Hypothesis Testing, Chi-Square Testing, RFM, Churn Analysis, CLV Modeling, Retention Analysis

Tools & Platforms: Git, GitHub, Jira, AWS (S3, Redshift), Azure, PySpark, Amplitude, Julius AI, LLM tools (Claude, Gemini)

EDUCATION

Northeastern University, Boston, Massachusetts

May 2025

Master of Science in Data Analytics Engineering, GPA: 3.92

Guru Gobind Singh Indraprastha University, New Delhi, India

Sept 2020

Bachelor of Technology in Mechanical and Automation
